

How to Merge Split Video Files

1. Put **only** the `PART` files in one folder — nothing else.
2. Install `ffmpeg` if needed (`winget install ffmpeg` / `brew install ffmpeg` / `apt install ffmpeg`).
3. Open a terminal in that folder.
4. Copy the command below, paste into the terminal, press Enter.

Mac / Linux

```
ls -1v *.PART* | sed "s/^/file '\/;s$/'/" > list.txt && ffmpeg -y -f concat -safe 0 -i list.txt -c copy "$(grep PART1 list.txt | sed "s/file '\/;s$/;s/'$//;s/.PART1\.\/'")"
```

Windows (PowerShell)

```
gci *PART* | sort Name | % { "file '$($_.Name)'" } | sc list.txt && ffmpeg -y -f concat -safe 0 -i list.txt -c copy ((Select-String PART1 list.txt).Line -replace "file '|'\.PART1\.", '')
```

The merged file lands in the same folder, named from `PART1` (e.g. `HolidayClip.PART1.mp4` → `HolidayClip.mp4`).

The command builds a small `list.txt` from whatever `PART` files are in the folder, then `ffmpeg` stitches them together. Works for any number of parts.

Old byte chunks (`movie.mp4.part001` , ...): `cat movie.mp4.part* > movie.mp4`

ffmpeg not found? Install it and open a new terminal.
