

How to Merge Split Video Files

GUI Method

1. Install [MKVToolNix](#)
2. Drag your files into the input sources section and hit `ok`
 - Make sure videos are in the correct order to be merged
3. Hit `Start multiplexing` and it should finish in a minute or so
 - This is just merging, not re-encoding, so it's mostly reliant on your disk speed

Command Line Method

```
ffmpeg -f concat -safe 0 -i "concat:Part1.mkv|Part2.mkv|Part3.mkv" -c copy Final.mkv
```
